custom King Tide tattoos Tattoo

Aftercare

1. Remove the bandage after 12 to 24 hours and wash the tattoo with your hands, hot water, and mild soap. Pat dry with a clean towel or allow to air dry. If you see a shiny, clear film, repeat washing until the film is gone. If your tattoo continues to seep, continue washing throughout the day.
2. On the 3rd day, apply small amounts of a mild, unscented lotion 2-4 times a day when your tattoo is dry or itchy. We recommend using Glaxal Base lotion, which is made in Canada. If your lotion burns, switch brands! If your tattoo gets itchy, don't scratch it!!! Gently slap it.
3. Wash your tattoo every day, but don't allow it to soak!
4. After 3 or 4 days, your tattoo will either peel like a sunburn or scab over. Do not pick off scabs or soak them off in the shower.
5. When the scabbing or peeling comes off your tattoo, you can start getting it wet again. Do not expose your tattoo to the sun, tanning beds, or go swimming for at least 3 weeks!
6. Only follow these healing instructions, and do not listen to advice from other people when healing this tattoo. If you have any questions or problems with healing, please call us at 604-741-7261 or email us at kingtidetattoo@gmail.com
